

The Leader in Transformer Services

Maintenance • Field Repairs • Assembly

OIL RECLAMATION & PROCESSING

Extend the Life of Your Transformers

PSS hot oil reclamation rigs have purified millions of gallons of oil, prolonging the life of thousands of transformers.

ASSEMBLY & VACUUM FILLING

Expert Nationwide Service

Our teams travel across the country safely installing, assembling, vacuum-filling and commissioning substation, power and GSU transformers of all kinds.

FIELD REPAIRS

We Work Weekends & Holidays to Minimize Your Downtime

Transformer repairs. Replacing components. Preventive maintenance. Our experienced teams do it all, including:

- Regasketing
- Internal and External Inspections
- Electrical Testing
- Welding Repairs
- Bushing and Radiator Replacement
- Load Tap Changer

OIL SAMPLING & TESTING

Preventative Maintenance Dramatically Decreases Operating Costs

Maintenance of substation transformers is often neglected, with potentially severe consequences. PSS' comprehensive, 19-point oil testing process is the best in the industry.

PCB DECONTAMINATION & DECHLORINATION

The Only Mobile PCB Oil Treatment Process Permitted by the EPA

We travel to customer locations throughout the United States and use our proprietary PCBXSM process to decontaminate the PCBs from the transformer mineral oil while the transformer is energized.

RETROFILL

Improve Reliability & Safety. Reduce Environmental Hazards.

PSS retrofills power transformers with a variety of fluids based on specific applications and customer needs.
